

OEC Fiber is building our Fiber network in your neighborhood

Over the next few weeks, OEC Fiber crews will be laying fiber lines in order to bring your neighborhood affordable, reliable, high-speed OEC Fiber services in the future. Our lines follow existing electrical paths in most areas, so this means our lines may need to run through existing easements in your front, side or back yard depending on your property's location.

We realize this may be an inconvenience to you, but with your assistance, we can complete our work in a timely manner and minimize your disruption. It may take multiple visits to finish the laying of fiber lines in your area. Rest assured, after the fiber and necessary equipment are in place, crews will work to restore any affected areas of your yard.

If you do not notice workers immediately, please bear with us as we may be just down the street. If you have any questions or concerns about construction or restoration in your area, please call our contractor, Trans-Tel, or OEC Fiber directly any time - both numbers are listed below.
